

CML3112 — Dataset Reference Sheet

Civil Engineering Field Inspection Dataset & Setup Guide

1. CSV Dataset Structure (`site\_inspection\_log.csv`)

Below is the exact dataset required for the Week 2 assignment. It models structural health monitoring crack width measurements (mm) from concrete field inspections.

reading_id	crack_width_mm	inspection_notes
1	0.12	Minor hairline crack observed on deck beam A
2	0.25	Moderate flexural crack near mid-span
3	0.31	Shear crack requiring monitoring near abutment
4	0.18	Hairline shrinkage crack near joint B

2. Raw CSV Format (Plain Text)

```
reading_id,crack_width_mm 1,0.12 2,0.25 3,0.31 4,0.18
```

3. Colab Auto-Generation Snippet

You can also run this Python cell inside your Google Colab notebook to generate the CSV file directly:

```
import csv
data = [ ["reading_id", "crack_width_mm"], ["1", "0.12"], ["2", "0.25"], ["3", "0.31"], ["4", "0.18"] ]
with open("site_inspection_log.csv", "w", newline="") as f:
    writer = csv.writer(f)
    writer.writerows(data)
print("site_inspection_log.csv created successfully!")
```

Submission Reminder: When running `proof_of_life.ipynb`, executing `len(rows)` must return exactly **4** records to satisfy the automated grading rubric.
